REGISTER OF RAINFALL IN 1897

Kept at The High Field, Bickley *the County of* Kent *by* James Batten

Latitude ....

Time of Observation 9 am

Longitude ....

RAIN GAUGE.

Diameter 5 inches

Height of Receiver above Ground 1' 2"

" " " Sea Level 295

Condensed Instructions.—Fix the gauge firmly, with its orifice level and 1 ft. above the ground, quite clear of trees and walls, empty it daily at 9 a.m., and enter it against the preceding day. Snow should be melted slowly in a closed vessel and the amount entered as rain, an "S" being prefixed. With a low temperature and high wind, it is sometimes blown out of the funnel; then take one-twelfth of the average depth of snow, and enter that as the yield of water—*e.g.*, 3 inches snow = ·25 of rain. When there is no rain, a line should be drawn, rather than cyphers inserted.

Accurate observers of rainfall will oblige by sending a copy of their record to Mr. G. J. Symons, of 62, Camden Square, London, N.W., for insertion in his annual tables of *British Rainfall*, which now contain returns from about 2,000 stations.

Additional Copies of this form (price 3d. each) can be obtained of the above, from Mr. Stanford, 55, *Charing Cross, and from all the leading opticians.*

EWRSW

REGISTER OF RAINFALL IN 1895

Kept at 1 Camden Park Tunbridge Wells *by* James Weston

Latitude

Longitude

Time of Observation 9.0 a.m.

Height of Receiver of Rain Gauge: Above Ground 9 inches; Above Sea Level 424 ft.

Condensed Instructions.—Place the gauge on the ground, quite clear of trees and walls, keep its orifice level, empty it daily at 9 a.m., and enter it against the preceding day. Snow should be melted slowly in a closed vessel and the amount entered as rain, an "S" being prefixed. With a low temperature and high wind it is sometimes blown out of the funnel; take then one-twelfth of the average depth of snow and enter that as the yield of water, *e.g.*, 2 inches snow = ·17 of rain. When there is no rain a line should be drawn, rather than cyphers inserted.
